## **CUSTOMER**

Project: AB InBev - Stella Artois Location: Leuven, BELGIUM Application: Breweries

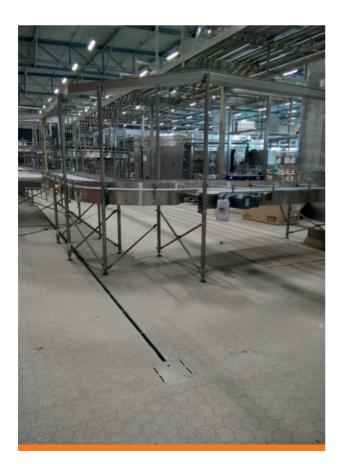

## **PROJECT BACKGROUND**

The AB InBev group relied on ATT's drainage products to equip their STELLA ARTOIS bottling plant built in 2014.

Drainage channels were manufactured in customized design, coming in 6-meter length sections and ready to be welded onsite to keep the highest hygienic standards in the brewing industry.

The successful installation of ATT drainage led to the delivery of ATT equipment to other AB InBev breweries, including a new plant extension at the STELLA ARTOIS plant in year 2017.

ATT manufactured more than 600 meters of stainless steel channels with plate / anti-slip mesh gratings, as well as 36 floor drains with reinforced edges:

Product	Units delivered
Slot channel S70, width 70mm, slot opening 30mm, stainless steel AISI 304	301.50 meters
Channel S200, width 200 mm, stainless steel AISI 304	161.50 meters
Channel S350, width 350 mm, stainless steel AISI 304	144.90 meters
Floor drain W250, square top 250x250mm, horizontal outlet diameter	32
110mm	
Floor drain W300, square top 300x300mm, horizontal outlet diameter	4
160mm
