

# Storage Racks for Euro Bins

## Stainless Steel Storage Racks for Euro Bins

Designed for safe and organized storage of Euro Bins ATT stainless steel racks combine durability with hygienic design — essential features in modern food processing environments.

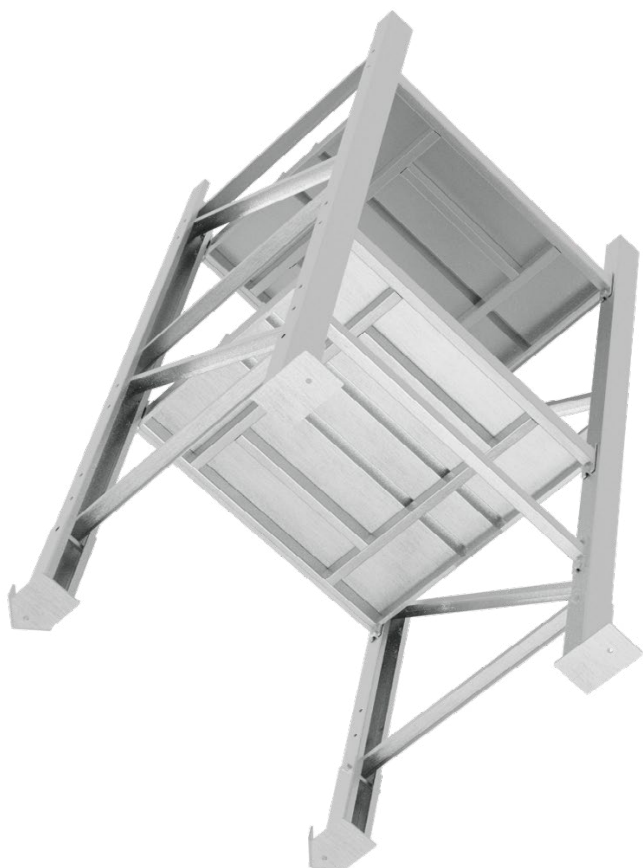

Each rack is equipped with two robust shelves, engineered to hold up to 250 kg per level (including the bin). The construction allows for modular connection, meaning multiple racks can be linked together to create larger, continuous storage systems tailored to your facility layout.

- Material: High-grade stainless steel (AISI 304 and AISI 316L)
- Load capacity: 250 kg per shelf (with bin)
- Configuration: 2 levels per rack, extendable design
- Application: Storage of Euro Bins in hygienic production and warehouse zones

Every detail of the rack's structure is optimized for easy cleaning and maintenance. Smooth surfaces, open design, and precise welds ensure there are no hidden areas where dirt or moisture can accumulate, making them ideal for environments with strict hygiene requirements.

Whether used as standalone units or connected into larger systems, ATT stainless steel racks guarantee stability, hygiene, and long service life — perfectly complementing our Euro Bin range.
